## **LeMarchand Mansion** Edmonton, Alberta

This historic building, constructed in 1912, was converted from an apartment building to a high quality office complex. TWS engineered the electrical which included the replacement of all electrical equipment with special consideration given to lighting applications that did not take away from the traditional turn-of-the-century design of the building. Contemporary computer, communication and power systems were distributed throughout the building. TWS also provided electrical engineering for the adjacent luxury high rise that was designed to blend in with the original building.

TWS understands the importance of lighting as it relates to architectural integrity as demonstrated in Edmonton's historic LeMarchand Mansion.
